Truong Nguyen Hoang Long

WEB SYSTEM ENGINEER

Email: truongnguyenhoanglong@gmail.com | GitHub: https://github.com/Decsr | LinkedIn: https://www.linkedin.com/in/decsr/

INTRODUCTION

Software Engineer with experience in software development and system integration. Adaptable and eager to learn, I am open to new opportunities that challenge me to expand my technical skills, explore new technologies, and contribute to building reliable software solutions.

WORK EXPERIENCE

Software Engineer | Greystone Data Systems Vietnam

May 2025 – Present. R&D department of 100+ engineers, working alongside assembly technicians

- Design and implement MQTT (Mosquitto) communication across 8 topics between machine software, firmware, and the web system, connecting 4 industrial machines and enabling real-time status dashboards, centralized log storage, and remote control.
- Write software specifications and technical documentation defining how software, hardware, and web components interact, serving as the reference for cross-functional teams.
- Develop Qt-based user interfaces for industrial machine control software.
- Work with hardware and assembly teams during machine integration and commissioning to verify end-to-end behavior across software, firmware, and web services.
- Manage builds and source control with CMake, Git, and GitLab in a Linux environment.

Backend Developer | FPT Software

Apr 2024 – Apr 2025. Offshore team serving the Japanese market, within a business unit of 100+ people

- Participated in the software development process for enterprise projects serving Japanese clients, contributing to backend features and RESTful APIs.
- Contributed to writing project documentation and software specifications.
- Participated in designing project modules, translating requirements into technical solutions.
- Carried out project deployment and environment configuration.
- Maintained delivered systems, investigating and resolving issues based on customer feedback and requests.
- Prepared reports on request, responding to customer inquiries and feedback.
- Collaborated with QA and testing teams to investigate issues and support debugging.
- Migrated legacy Visual Basic modules to a modern C# application.

PROJECTS

Decsr-Code — Multi-Agent Coding Pipeline (Go) | github.com/Decsr/Decsr-Code

Open-source · Author · MIT

- Built an open-source Go tool that drives specialist AI agents (PM, Coder, QA, UX Reviewer, Security) through a structured pipeline: context pack, task spec negotiation, decomposition, TDD implementation, global build/test/fix, and quality review with PM arbitration.
- Added human approval gates before code is written and resumable runs with sub-tasks tracked as beads; project memory in Markdown indexed with SQLite FTS5/BM25.
- Built a Bubble Tea terminal UI with a headless plain-text mode, and runners for CLI tools (OpenCode, Claude CLI, Codex CLI, GitHub Copilot CLI) and local model servers (Ollama, LM Studio, MLX).
- Set up GitHub Actions CI (build, vet, gofmt, race tests on Linux/macOS) and GoReleaser releases for Linux, macOS, and Windows (amd64/arm64).

EDUCATION

FPT University
Bachelor's Degree in Software Engineering. Graduated | 2021 – 2026

SKILLS

Programming Languages: C#, Java, C/C++, Python
System Integration: MQTT (Mosquitto), SW–HW–Web communication workflows, remote monitoring and control
Backend: ASP.NET Core, Entity Framework Core, RESTful APIs, Spring Boot
Database: SQL Server, PostgreSQL
Operating Systems & Build Tools: Linux, CMake
Tools: Qt Creator, Visual Studio, VS Code, Git, GitLab, Docker, Postman
Reporting: JasperReports
AI Tools: Claude, Codex, DeepSeek, GLM

LANGUAGES

- **English:** Good conversational proficiency (working communication)
- **Vietnamese:** Native

ACHIEVEMENTS

- Third Prize, Provincial Informatics Competition (2021)
- Consolation Prize, North Central Delta Olympic Competition (2020)
- Top 100 Summer Camps in the Central Region (2021)
- Encouragement Prize, Young Informatics Competition in the Central Highlands and Central Region (2021)
